Super Combo - Model EZ 4400 CV

DEFINITIONS

Venting Combo: Where the dryer air is exhausted externally from the machine

Condensing Combo: A water cooled system is used to extract moisture from the dryer heat and expel through the drain pump

Convertible Combo: A single unit that can be converted from Venting drying to Condensing drying by the press of a button

ENERGY SAVING

Automatic Water Level: Weighs the clothes to automatically use the correct amount of water required

Sensor Dry: Moisture sensor selects the correct amount of time to dry the clothes

Delay Start: Set the start time up to 24 hours later, in one hour increments

BETTER DRYING

Exhaust fan: Super Combo has an exhaust fan that will work in the venting cycle, in addition to the turbo blower fan. This dries the clothes faster

Stronger Drain Pump: The German Hanning 85W pump drains water faster in the condensing cycle that results in faster drying

Automatic Dual Spin Function: The drum will spin once at the end of the wash cycle, and once again at the beginning of the dry cycle, to extract maximum water in order to dry clothes faster

Refresh function: A 10 minute hot dryer cycle to refresh clothes before folding

Wrinkle Guard: Drum will turn a ½ turn every 5 minutes after the end of the dry cycle, in order to reduce wrinkles. This will go on for 8 hours or the door is opened first

SPECIAL FEATURES

Self clean option: Runs a short wash to clean the drum

Child lock: Locks all operations during cycle so a child cannot operate it

Pause: Stop the operations at any time of the cycle for any reason

Add-a-Sock: Open the door during a wash cycle to add clothes

End of cycle chime: The machine will chime at the end of the program every 5 minutes until any button is pressed or the door is opened

FASTER SERVICE

Built-in Diagnostics: Choice of 13 error codes inform the user of possible problems, reducing down-time for service
